CHOICE OF CHRISTMAS TREES CALLS FOR KNOW-HOW

Some people, shopping for or cutting Christmas trees, are as lost as the proverbial babes in the woods.

Others, with some ken, do a pretty good job. Foresters at VPI have some tips for people who would like to be in the latter, more knowledgeable category.

Some of the more popular Christmas trees offered for sale in Virginia are Douglas fir, balsam fir, white pine, Scotch pine, white spruce, Norway spruce, and red cedar. It isn't easy for the layman to distinguish between some of the evergreens. However, the needles, and their arrangement on the twig can be used to identify trees.

If the needles are scalelike, the tree is likely a red or white cedar. If leaves are needlelik, and in clusters of two to five needles, it is probably a pine. If the leaves are not in clusters, but are attached singly to the twig or branch, the tree is a fir or spruce. To distinguish between fir and spruce, roll a needle between your thumb and forefinger. If the needle rolls readily, the tree is a spruce. If you have difficulty rolling the needle because of the flatness, the tree is a fir.

Each kind has noteworthy characteristics. On firs the branches are fairly firm, and the frangrance is pleasant. On white pine firmness of the branches is poor, the frangrance is fair, Scotch pine have good firm branches, fair fragrance. White spruce have good firm branches, excellent frangrances.

Foresters say to get a freshly cut tree if possible. Examine the tree for branch firmness. Heavy ornaments will weigh branches down. Select a tree which is round and full of branches. Keep it fresh by setting it in water. The average tree will use up to one quart of water per day in a warm house.

POE HARDWARE COMPANY

Appomattox, Va.

THEY WORK HARDER BECAUSE THEY RIDE EASIER!

Because they ride easier they last longer, too. They take better care of payloads and they make a long day's work a lot more pleasant for the driver. All that—primarily because of Independent Front Suspension (I.F.S.). If you think it's stretching a point to attribute that many advantages to a suspension system, you haven't driven a new Chevy with I.F.S. Take the wheel and feel its road-leveling ride, its almost total absence of shimmy and wheel fight, its ease of steering even in the big rigs. Spend hours behind the wheel and you're not nearly as tired. You're not and neither is the truck. That independent suspension soaks up the worst shock and vibration—the kind that can twist sheet metal and loosen joints and increase your maintenance costs. That's why Chevy trucks keep on working and saving for extra thousands of miles.
